The problem looks to be in your screen structure file which (I'm guessing here) contains the line:

```
$structure['tables']['outer'] = 'aasa_user.user';
```

instead of

```
$structure['tables']['outer'] = 'user';
```

It must contain ONLY the table name, not the table name prefixed with the database name. That is why there is a mismatch in the XML document between the data entry and the structure entry. The two names must match EXACTLY, in case as well as spelling.
