If you know that your database will always be MySQL then you can continue to use ENUM fields. If you ever decide to use another DBMS which does not have ENUM fields then you will have a problem.

I do not plan to remove support for ENUM fields from Radicore so you can carry on using them. I stopped using them in my sample application as I needed a version that could also run on PostgreSQL. This means that I can switch from MySQL to PostgreSQL and back again just by changing one line in the CONFIG.INC file. No code anywhere else needs to change.

I shall update the FAQ to include information regarding ENUM fields.
