Hi,

Another minor thing due to the (in between)update.

The `update_array()` functions seems to be changed to `update_array_indexed(0` and `update_array_associative()`.

Now I got following error.

from eg. [http://localhost/radicore/dict/column\\_upd.php](http://localhost/radicore/dict/column_upd.php)

Fatal error: Call to undefined function `array_update()` in `/tools/lampp/htdocs/radicore/includes/std.update1.inc` on line 141

Concerning the enum field type, I think I,m going to follow your advice and remove the enum field type from the database and put it in my code. The code depends on the state of this field, and I think it is better if such stays in the code itself instead of the database.

Greetings and thanks a lot for your great support.

Johan
