I am running Radicore version 1.81.0 on my humble little laptop, and I am also running the following database servers:
- MySQL version 5.6.15
- PostgreSQL version 9.2.5
- Oracle version 11g Express Edition Release 11.2.0.2.0
- SQL Server version 2008 10.00.5500

I can switch between any of these database engines without noticing any difference in speed, so I would suspect that something is wrong with your SQL Server installation.

What version of PHP are you using? What version of SQL Server?

If you try running queries through SQL Server Management Studio are they slow as well?
