The tutorial does not show the code that *you* have to change in the framework as that code is already there. All you have to do is include a column called 'rdcaccount_id' in your table structure and the framework will do the rest.

When the value for rdcaccount_id is '1' this indicates the shared account which will be viewed by everybody. When the value is greater than '1' you will see those records for that account plus the shared account.
