I am not seeing this at all in the VPD application which I set up.

It has the following users:
VPD1 with rdcaccount_id = 1
VPD2 with rdcaccount_id = 2
VPD4 with rdcaccount_id = 3

If I logon as VPD1 and go to the 'List X Option' screen I can only see those options with rdcaccount_id = 1.
With VPD2 I see records with rdcaccount_id = 1 or 2.
With VPD3 I see records with rdcaccount_id = 1 or 3.

If I then go to the 'List Person by Option' screen (which is a List2 screen) then I see what I expect to see:
VPD1 - records with rdcaccount_id = 1
VPD2 - records with rdcaccount_id = 1 or 2
VPD3 - records with rdcaccount_id = 1 or 3

You should be able to duplicate this for yourself with the copy that I sent you.
