Hi Tony,

I have created a popUp Task which shows me the entries of a lookup table and inserts the PKey-Fields (user_id, user_seq_no) in the child table.

Now I want to get additional field values (user_name, user_firstname) from the parent table for also inserting in the child table. The \$select_array contains only the pkey values.

How can I get these additional values best?

Best regards,

Juergen
