---

I found the error (at least for my web environment).

I uncommented the following lines (7591-7593) in the file /includes/tcpdf/tcpdf\_php5.php.

```
// Send PDF to the standard output
// if (ob_get_contents()) {
//   $this->Error('Some data has already been output, can\'t send PDF file');
// }
```

With `var_dump(ob_get_contents());` I got different values when I opened one of your reports e.g. for database tables (`string(0) ""`) and one of my generated reports (`string(3) ""`).

I think you will know where these different values come from and maybe change the code. For me it works fine with this lines commenting out.
