I checked again the output2.php file and the list.report.inc file and commented out every blank line. The same result.
Am I right that these are all the files which are involved in the pdf process?
I get this error even if I generate the code with Radicore without touching or even opening the files.
I have no more idea where I can search for this fault, maybe it comes from a different collation or from my ISP!?! In the beginning I had also problems to get the logon screen. Increasing certain settings solved the problem with mod_fcgid.
As far as I am concerned at the moment I will let these three lines commented out.
Thanks a lot for your patience.
