I try radcore version 1.18. I upgrade to 1.19 and the problem is OK.

But, when I try import table:

```
x_person  
..  
..  
value2 numeric(10,2)  
..  
..
```

The system show the next message:

```
..  
..  
Seq: 11, col_minvalue: Value is not a number  
Seq: 11, col_maxvalue: Value is not a number  
Seq: 11, user_maxvalue: Value is not a number  
..  
..
```

I revised the xample aplication, and the column is defined : DECIMAL, but in the xample-schema.sql, say numeric(10,2).

PD: Thanks for all
