Subject: pdf.styles.inc Posted by htManager on Mon, 04 Aug 2014 14:48:22 GMT View Forum Message <> Reply to Message

According to RADICORE for PHP - creating PDF output, each subsystem uses its own pdf.styles.inc file.

I have now the problem that my subsystem/pdf.styles.inc file is only used if I rename the pdf.styles.inc files in the audit, menu and workflow subsystems. Do I have to change a config file somewhere?
