How can I do that?
I tried to step through the code from the beginning. But with no success because of the many code lines..
Do I have to set break points in every file I (Radicore) created by myself?
I use Eclipse (Luna) with xDebug. I worked with an integrated debugger in ObjectPAL but there I knew which function/method will be executed next or where I had to look for. With Radicore I will look for the error which is definitly coming from my system but I don't know where to look for the error nor how.
If I output the menu_pattern list the message is string '' (length=0)
