Subject: Dropdown list

I have a dropdown list in which I want to list entries from a database table. Now I don't know how to change or create the selection criteria.

Can I change the $where criteria in the _cm_getValRep method of the class? If yes, how can I do this?

The first fields of the primary key are the same for both tables. So how can I get these values for using in the selection criteria?

Here is the code:

```
 function _cm_getValRep ($item=null, $where=null)
 // get Value/Representation list as an associative array.
 {
  $array = array();

 if ($item == 'ma_mitglieder') {
   // get data from the database
   $where = $where_mannschaft;
   $this->sql_select     = 'kontakt_ma_user_id, kontakt_ma_user_seq_no, kontakt_ma_name,
kontakt_ma_vorname';
   $this->sql_orderby    = 'kontakt_ma_name';
   $this->sql_ordery_seq = 'asc';
   $data = $this->getData($where);

   // convert each row into 'id=desc' in the output array
   foreach ($data as $row => $rowdata) {
    $rowvalues = array_values($rowdata);
    $array[$rowvalues[0]] = $rowvalues[0];
   } // foreach

   return $array;
  } // if

  return $array;

 } // _cm_getValRep
```
