I have a dropdown list in which I want to list entries from a database table. Now I don't know how to change or create the selection criteria.

Can I change the \$where criteria in the _cm_getValRep method of the class? If yes, how can I do this?

The first fields of the primary key are the same for both tables. So how can I get these values for using in the selection criteria?

Here is the code:

```
function _cm_getValRep ($item=null, $where=null)
// get Value/Representation list as an associative array.
{
    $array = array();

if ($item == 'ma_mitglieder') {
    // get data from the database
    $where = $where_mannschaft;
    $this->sql_select  = 'kontakt_ma_user_id, kontakt_ma_user_seq_no, kontakt_ma_name,
kontakt_ma_vorname';
    $this->sql_orderby = 'kontakt_ma_name';
    $this->sql_ordery_seq = 'asc';
    $data = $this->getData($where);

    // convert each row into 'id=desc' in the output array
    foreach ($data as $row => $rowdata) {
        $rowvalues = array_values($rowdata);
        $array[$rowvalues[0]] = $rowvalues[0];
    } // foreach

    return $array;
} // if

return $array;

} // _cm_getValRep
```
