I still struggle with the problem to output pdf files.
For output2 pattern I have inserted ob_clean(); in line 7588 and it works.

```
switch($dest) {
    case 'I': {
    // Send PDF to the standard output
    ob_clean();

    if (ob_get_contents()) {
        $this->Error('Some data has already been output, can\'t send PDF file');
    }
```

Printing output3 pattern doesn't work, so I added var_dump(headers_list()); in line 7598

```
      if (php_sapi_name() != 'cli') {
 // send output to a browser
 var_dump(headers_list());
 header('Content-Type: application/pdf');
```

I got this array:

```
array (size=5)
  0 => string 'X-Powered-By: PHP/5.4.7' (length=23)
  1 => string 'Expires: Thu, 19 Nov 1981 08:52:00 GMT' (length=38)
  2 => string 'Cache-Control: no-store, no-cache, must-revalidate, post-check=0, pre-check=0'
(length=77)
  3 => string 'Pragma: no-cache' (length=16)
  4 => string 'Content-type: text/html' (length=23)
```

Can this be a problem with the php version 5.4.7?
I run Windows 7, MySQL 5.5.27 in a xampp environment.
Is your development environment the same or different?
