Just discovered another case that my original proposal did not solve.

```
$where = " test_id < 3";(With a space before 'test_id')
```

This results in

Fatal Error: Cannot extract token from: ' test_id < 3' (# 256)

Error in line 6993 of file 'D:\Pet\UwAmp\www\rad186\includes\include.library.inc'.

To take care of such cases, I would like to modify my original proposal to

...

```
$input = $where;
```

```
// Add this line to solve "Cannot extract token from" error:
```

```
$where = trim(preg_replace("/\s+/", " ", $where));
```

```
$output = array();
```

```
while (!empty($where)) {
```

```
...
```
