Still having an issue; this time it is when trying to add a remote pgsql db to the servers array from this config.inc:

```
// server 0
$servers[0]['dbhost']            = 'my.fqdn.com';
//$servers[0]['dbhost']            = '10.206.29.212';
$servers[0]['dbengine']          = 'pgsql';
$servers[0]['dbusername']        = 'mydbuser';
$servers[0]['dbuserpass']        = 'mydbpwd';
$servers[0]['dbport']            = '5432';
$servers[0]['dbsocket']          = '';
$servers[0]['dbprefix']          = '';
$servers[0]['PGSQL_dbname']      = 'radicore';
$servers[0]['dbnames']           = 'newscheme,*';
$servers[0]['ssl_key']           = '';
$servers[0]['ssl_cert']          = '';
$servers[0]['ssl_ca']            = '';
$servers[0]['ssl_capath']        = '';
$servers[0]['ssl_cipher']        = '';
// server
```

Error:
Fatal Error: Undefined variable: unbuffered_query
Error in line 77 of file 'C:\xampp\radicore\includes\dml.pgsql.class.inc'.
PHP_SELF: /radicore/dict/database(add1)import.php
CURRENT DIRECTORY: C:\xampp\htdocs\radicore\dict
SERVER_ADDR: ::1
SERVER_NAME: localhost
HTTP_HOST: localhost

REMOTE_ADDR: ::1
REQUEST_URI: /radicore/dict/database(add1)import.php?session_name=menu21

Line 77: trigger_error('No value supplied for PGSQL_dbname', E_USER_ERROR);

I am looking in std.table.class.inc and dict_database_s01.class.inc. Can't find any place where PGSQL_dbname is retrieved from $servers array.
