Thanks for your answer.

I've tried the following changes in _cm_chageConfig:

first try, nothing happens
$this->fieldarray['printbutton'] = null;
$this->fieldspec['printbutton'] = array ('type'=> 'string',
'control'=> 'input',
'subtype' => 'button',
'value' => 'IMPRIMIR',
'task_id' => 'ticket(add4)');

second try, nothing happens
$this->fieldarray['printbutton'] = null;
$this->fieldspec['printbutton'] = array ('type'=> 'string',
'control'=> 'input',
'subtype' => 'button',
'value' => 'IMPRIMIR',
'task_id' => 'ticket(add4)',
'nondb'=>'y');

third try, Fatal Error: Mysql: Unkknow column Â´tarifa.printbuttonÂ´.....
$fieldarray['printbutton'] = null;
$this->fieldspec['printbutton'] = array ('type'=> 'string',
'control'=> 'input',
'subtype' => 'button',
'value' => 'IMPRIMIR',
'task_id' => 'ticket(add4)');

fourth try, the "button" appears like a string input field
$fieldarray['printbutton'] = null;
$this->fieldspec['printbutton'] = array ('type'=> 'string',
'control'=> 'input',
'subtype' => 'button',
'value' => 'IMPRIMIR',
'task_id' => 'ticket(add4)',
'nondb'=>'y');

Sorry to bother, and thanks for your patience.
