After returning from another form you can use the following code to determine the pattern_id of that form:

```
if (!empty($GLOBALS['return_from'])) {  
    $prev_pattern_id = getPatternId($GLOBALS['return_from']);  
}
```

\$GLOBALS['return_from'] will contain the task_id of the form from which you have just returned, and with the above code you can identify its pattern.
