Does the menu system support multi-page wizards?

I have a 4 step process that would be greatly simplified by the menu system support this kind of action. Looking at the framework I can hack the std.*.inc files to be not_std.*.inc and get wizard navigation to work, but it's a hack and storing the intermediate state is a mess with session variables.

Any suggestions on implementing this and specifically store the 'temporary' page state until the final commit of the last wizard page?

Thanks,

Kyle Brost
