You have not identified where the ORDER BY training_plan_kategorie_desc is coming from. It must be defined by you somewhere as the framework would not insert it.

If a table contains the field 'rdcaccount_id' then you must supply a value. One should normally be associated with your menu user_id. You will then only be able to see those entries on the table which have the same value for 'rdcaccount_id' as defined for your user_id, or the value 'rdcaccount_id=1'. If no records are shown then there are none that qualify.
