Hi Tony,

For Tutorial 5, I encountered a problem doing the following

Test -> x\_person -> (select a record I just created) x\_person\_addr -> New -> I keyed in (Addr Line 1 = 'Address Line 1', Town = 'SJ', Postcode = '47600') -> Submit

I encountered an error. When I checked the error log it says

```
[24-Jan-2007 17:26:28] PHP Fatal error:  validation_class::require_once() [
```

Seems like Php is able to find std.validation.class.inc. So it could be the syntax of the generated code for sample.validation.class.inc

Im not sure if validation =&quot; is valid. Please advice if any changes is necessary to fix this.

FYI, the value for <CUSTOM Validation> for telephone\_no, is set to:  
subtype=CUSTOM, validation=" sample.validation.class.inc/sample\_validation\_class/telephone\_no " (Meaning that I copied this into that field)
