I have already shown you how to generate a horizontal line. The documentation already shows how you can output an image in a line. There is code in the EXAMPLE prototype which does this.

If each line in the report has its own 'multiN' record, but if you do not want anything output (not even a blank line) then set \$outarray to FALSE or an empty array. If there is anything in \$outarray at all then a line will be printed, even if it is blank.
