The navigation button identifies which task is to be run. The task_id gets translated into a script name (such as 'f_payment(list1).php') which gets loaded into the URL.

I cannot possibly debug this problem with the information you have given me. You need to step through with your debugger to see what is going wrong. You may have a blank line in one of your scripts which is being output to the browser. This is a common cause of problems as absolutely NOTHING must be output until AFTER the headers have been sent, which in the Radicore framework is right at the end of each controller script when it calls buildXML().
