I have added your fix to the getCount() method within std.table.class.inc as follows:

```
// *****  
function getCount ($where=null)  
// get count of records that satisfy selection criteria in $where.  
{  
    if (strlen(trim(preg_replace("/^\s+/u", "", $where))) > 0) {  
        $count = $this->_dml_getCount($where);  
        return $count;  
    } else {  
        return 0;  
    } // if  
  
} // getCount
```
