If you want to do some processing after a record has been retrieved but before it is displayed then you can use the `_cm_post_getData()` method.

If you want to change a field to read-only then refer to
<http://www.tonymarston.net/php-mysql/infrastructure-faq.html#faq10>

If you want to change the colour of a field then refer to
<http://www.tonymarston.net/php-mysql/infrastructure-faq.html#faq73>. To do this for a whole row you must apply it to every field in that row.
