Not sure if this is a bug.

I have some business logic in _cm_pre_insertRecord ($rowdata)

Tried to do update statement like
'UPDATE '. $table .' SET rgt=rgt+2 WHERE rgt>='. $parent_rgt;

So, I did:
$where_parent_rgt = 'rgt>='. $parent_rgt;
$replace_parent_rgt = 'rgt=rgt+2';
_dml_updateSelection ($where_parent_rgt, $replace_parent_rgt);

Apparently, the method keeps updating rgt to 0 for the affected records.

When I tested with
$replace_parent_rgt = 'rgt=12';

all affected records were updated correctly with rgt = 12.

Seems like _dml_updateSelection is not able to deal with expressions with operators.

Is this a bug? If it is not, do you currenly have a function that allows me to do the above in the framework?
