Subject: different results in queries

Was trying to call mysql_query, mysql_fetch_array in _cm_post_updateRecord

Can this be done? Seems like calling those does not give me any results or error messages.

I went back to mysql functions because radicore does not give me the correct results. Attached is a script to implement Van Tulder's Tree http://www.sitepoint.com/print/hierarchical-data-database.

One version is using radicore and the other using his script.

Test data:

role_id	role_id_snr	lft	rgt
GLOBAL	NULL	1	10
TESTING	GLOBAL	2	9
TESTING2	TESTING	3	8
TESTING3	TESTING2	4	7
TESTING4	TESTING3	5	6

Test Scenerio (Reparent TESTING2 to GLOBAL)

role_id	role_id_snr	lft	rgt
GLOBAL	NULL	1	10
TESTING	GLOBAL	2	3
TESTING2	TESTING	4	9
TESTING3	TESTING2	5	8
TESTING4	TESTING3	6	7
