Hallo,

I was trying to give an uploaded image a name which contains the product ID of the product where it belongs to.

I couldn't get the product\_ID from the \$whereArray in \_cm\_Fileupload. I've discovered that the \$where information gets lost because the \_cm\_InitialiseFileupload function doesn't give back a \$fieldarray.

I solved the problem by adding return \$fieldarray at the end of \_cm\_InitialiseFileupload.
