Ignore radicore_admin.zip. I have rebuilt the radicore-2017-08-03.zip file with the missing xample.zip.

The menu sql schema contains those COLLATE statements simply because the tool I use to maintain and export the schema puts them there.

Each time I delete thumbs.db from my file system the OS puts them back, and I have grown tired from deleting them manually from the zip file after I have created it. What problem does it cause?
