Hi,

I been looking that you suggested, but everything was ok. All the files in place.

I changed my computer lenguaje to english, and now I think where is the error, looking back to the program calls.

(!) SCREAM: Error suppression ignored for

(!) Fatal error: File C:\wamp\www\radicore\menu\text/en/sys.language_text.inc is empty in C:\wamp\www\radicore\includes\include.library.inc on line 3651

Call Stack

#	Time	Memory	Function	Location
1	0.0108	297272	{main}()	..\logon.php:0
2	1.9224	7200504	radicore_view->__construct()	..\logon.php:212
3	1.9258	7318944	trigger_error()	..\include.xml.php5.inc:37
4	1.9258	7319776	errorHandler()	..\include.xml.php5.inc:37
5	1.9258	7326560	getLanguageText()	..\error.inc:166
6	1.9267	7247992	trigger_error()	..\include.library.inc:3651

Found that probably the problem is with XSL functions. In the include.xml.php5.inc

--> trigger_error(getLanguageText('sys0070', 'XSL'), E_USER_ERROR);

Looking at installation instructions, in point

4. You will need to change permissions so that the following directories have write access:

RADICORE - for the errorlog.html file.

CLASSES - for all <table>.class.inc and <table>.dict.inc files.

ERROR_LOGS - for errorlog.html file.

LOGS - for all output from background tasks.

SQL - for all <subsystem>.dict_export.sql and <subsystem>.menu_export.sql files.

TEXT - for all <subsystem>.menu_export.txt files.

XSL - for all <script_id>.xml files.

Probably that is my problem!

But in my actual windows 10 enviroment and don't know how to do this.

Do I have to change in the httpd.conf?

Thank you for your support!
