Hi Tony,

I have a new laptop running WIN 10 and want to move my radicore application. I installed xampp 5.6, copied all files and changed the various path variables.

Now I get an unrecoverable error when trying to start radicore. You can see the screen shot in the attached picture.

Do I have to change the mailservers entries in php.ini? Or do I have to change entries in my config.inc?

Best regards,

Juergen
