The relationships seems to be fine.

I put the following code in the `_cm_PopUpReturn()` function:

```
function _cm_popupReturn ($fieldarray, $return_from, &$select_array, $return_files)
{
// liest Daten in Abhängigkeit des aufrufenden Formulars ein
switch ($return_from) {
case 'htm_orga_vereine(popup1)' :

// get contents of foreign table ORGA_VEREINE
$dbobject =& RDCsingleton::getInstance('orga_vereine'); // Instanz für Lookup-Tabelle
$where = "verbaende_art_id='{ $select_array['verbaende_art_id']}'
AND verbaende_kuerzel='{ $select_array['verbaende_kuerzel']}'
AND vereine_kuerzel='{ $select_array['vereine_kuerzel']}'";

$data = $dbobject->getData ($where);

if (!empty($data)){
    $data = $data[0];

        $fieldarray['kontakt_stamm_verbaende_art_id'] = $data['verbaende_art_id'];
        $fieldarray['kontakt_stamm_verbaende_kuerzel'] = $data['verbaende_kuerzel'];
        $fieldarray['kontakt_stamm_vereine_kuerzel'] = $data['vereine_kuerzel'];

        $fieldarray['kontakt_stamm_vereine_name'] = $data['vereine_name'];
    } // if
else
{
    $fieldarray['kontakt_stamm_vereine_name'] = "";
}
// else

} // switch

return $fieldarray;

}
```

The key values for `verbaende_art_id`, `verbaende_kuerzel` and `vereine_kuerzel` are changed as well.
