Can you provide a copy of your dict.inc file so that I can see your relationship details and the fieldspecs for the affected columns?

If the popup is returning columns with the names 'verbaende_art_id', 'verbaende_kuerzel' and 'vereine_kuerzel' then these columns will be copied across to your $fieldarray. If the column names in your $fieldarray are different then you need to delete the contents of $select_array after you have copied them to $fieldarray.
