As you mentioned, I do not need to delete rows in an add5 pattern. If I want to insert an additional single record, I do this with an add2 menu task.
Now my question: I select the records in the _cm_getInitialDataMultiple ($fieldarray) function where I get records from a foreign table via the line "$data = $dbobject->getData ($where);"
I tried to show them in a different order but I failed.
Is there the possibility to use $orderby or is the only possibility to sort the $fieldarray before it will be returned?
