As you mentioned, I do not need to delete rows in an add5 pattern. If I want to insert an additional single record, I do this with an add2 menu task.

Now my question: I select the records in the `_cm_getInitialDataMultiple ($fieldarray)` function where I get records from a foreign table via the line `"$data = $dbobject->getData ($where);"`

I tried to show them in a different order but I failed.

Is there the possibility to use `$orderby` or is the only possibility to sort the `$fieldarray` before it will be returned?
