Your query is basically SELECT ... FROM training\_plan\_anwesenheit LEFT JOIN training\_plan\_kopf ...

WHERE training\_plan\_anwesenheit.tplan\_anwesenheit\_saison\_id = '2018/2019'

If you replace the literal '2018/2019' with the column name training\_plan\_kopf.saison\_id you are basically saying "use whatever value you find in column training\_plan\_kopf.saison\_id", and as there is nothing in that query that limits that value to '2018/2019' it will use whatever values it finds.
