Your query is basically SELECT ... FROM training_plan_anwesenheit LEFT JOIN training_plan_kopf ...

WHERE training_plan_anwesenheit.tplan_anwesenheit_saison_id = '2018/2019'

If you replace the literal '2018/2019' with the column name training_plan_kopf.saison_id you are basically saying "use whatever value you find in column training_plan_kopf.saison_id", and as there is nothing in that query that limits that value to '2018/2019' it will use whatever values it finds.
