Hi,

I was reading through your std.datevalidation.class.inc to get some ideas on using regular expressions and think i found a bug:

In your:

function verifyTime($hours, $minutes, $seconds)

I think the statement:

if ($hours > 24)

should actually be

if ($hours > 23)

as this would validate 24 as a valid hour where we would move to 00.

Anyway nice to see some well documented and formatted code
