At the moment I can create the report header as I wanted as you can see in the attached screen shot.

My problem now is that I have the same value in all columns.

In the `cm_formatData()` method I can collect the data for the row by an array. But how to send them to the report? Is there a possibility such as for the header columns like
`"$this->dynamic_column_headings = array('id' => 'whatever');"`?

But I think I do not know how it definitely works. In my report body there is always the same field specified. So it should be always the same value....

```
$structure['body']['fields'][] = array('spiele_anwesenheit_status' => '%%2');  
$structure['body']['fields'][] = array('spiele_anwesenheit_status' => '%%3');  
$structure['body']['fields'][] = array('spiele_anwesenheit_status' => '%%4');  
$structure['body']['fields'][] = array('spiele_anwesenheit_status' => '%%5');
```
