If I understand you correctly you have 3 forms as follows:
1) A LIST2 pattern called "Auflistung Mannschafts-Mitglieder" which has TEAM as the outer table and TEAM_MEMBER as the inner.
2) A POPUP1 pattern called "Choose Mannschaften" which has TEAM as the only table
3) A POPUP2 pattern called "Choose Mannschaften Kontakte" which has TEAM as the outer table and TEAM_MEMBER as the inner.

When you call the POPUP1 task from the LIST2 task you can set $setting['select_one'] = TRUE in the _cm_popupCall method of the LIST2 task. When the POPUP1 task terminates it returns to the LIST2 task with the selected rows in the 3rd argument of the _cm_popupReturn() method.

When you call the POPUP2 task from the LIST2 task you are supposed to supply a value for the primary key of the outer table so that it can retrieve that entry and then display associated entries from the inner table. If you do NOT supply a value then you can suspend the processing of that POPUP2 task by calling a POPUP1 task as detailed in FAQ79.

I do not see any popup buttons on the LIST2 screen, so how are they being activated? If you are using navigation buttons then these do not operate in the same way as popup buttons.
