Subject: Filepicker - getDir()

I have problems with some filepicker tasks because of the DIRECTORY_SEPARATOR in an XAMPP installation on my notebook. Some of the tasks work fine but some use the '\' as separator in front of the picture file and so is in line 120 in the std.filepicker1.inc no correct filepath found and an error will be generated. I use the same directory where the pictures are stored for the tasks which work and for those which fail. Do I have to take attention to something special?
