Sorry, but I don't understand how to handle this.
I have an upd1 task (htm_orga_mannschaften_tests(upd1)) to open a detail screen in which I have a filepicker control with a filepicker task (htm_orga_tests_grafik_01(filepicker)).

"When the filepicker task exits" means that there must be in orga_mannschaften_tests.class.inc a method where I can change the selected string? But I have no idea which method this could be.

Have you read my complement and seen the screenshot?
