I copied these two directories into my htm application directory and amended the path in my code. The source code of the site is:

```
<script src=" HTTP://localhost/radicore/htm/./javascript/jquery-3.3.1.slim.min.js"> </script><script
src=" HTTP://localhost/radicore/htm/./javascript/jquery.cookie.min.js"> </script><script src="
HTTP://localhost/radicore/htm/javascript/ckeditor/ckeditor.js"> </script><script>window.onload =
function()
{
CKEDITOR.replace( 'bericht_text',
{
  toolbar : 'Basic',
  uiColor : '#9AB8F3'
});
}
</script>
```

If I press the links to javascript files like ckeditor.js I see the the content of these files in the browser. Exact the same as in the XAMPLE source code. Is there an additional file or directory which I have to copy?
