Hi Toni,

I have a list view report and I want to order the records alphabetical. In the `_cm_post_fetchRow($fieldarray)` method I get all the records in a different order.

In `functions-and-variables.html` I read that the `getData_serial($where)` methods gets all the records from the database. Afterwards they will be passed to the `_cm_post_fetchRow()` method one after the other.

In which `_cm_...` method can I see or change the order of the records or call the `getData_serial($where)` method?
