Hi Toni,

I have a list view report and I want to order the records alphabetical. In the \_cm\_post\_fetchRow(\$fieldarray) method I get all the records in a different order.

In functions-and-variables.html I read that the getData\_serial(\$where) methods gets all the records from the database. Afterwards they will be passed to the \_cm\_post\_fetchRow() method one after the other.

In which \_cm\_... method can I see or change the order of the records or call the getData\_serial(\$where) method?
