Subject: Re: How to consolidate all the Radicore databases into a single database Posted by AJM on Sat, 18 Sep 2021 09:14:30 GMT View Forum Message <> Reply to Message

Look at the condition on line 9:

if (preg_match('/^(127.0.0.1|localhost|desktop|laptop)\$/i', \$_SERVER['SERVER_NAME'])) { This will only set values in \$servers[0] if that condition is met. That example was for my personal test environment, so you either need to to comment out this line OR change the server name.
