There is a line of code in the TCPDF library like this:
$chars = TCPDF_STATIC::pregSplit('//','u', $str, -1, PREG_SPLIT_NO_EMPTY);
which is returning a boolean instead of an array. I don't know why it is doing this, so I have added the following 3 lines after it:

Â Â Â if (!is_array($chars)) { Â Â Â // *** AJM 07/05/2024
Â Â Â Â Â Â Â Â $chars = array(); Â Â Â Â Â Â // *** AJM 07/05/2024
Â Â Â } // if Â // *** AJM 07/05/2024

The amended script is in the attached zip file. Try it and see if it fixes your problem.
