There is a line of code in the TCPDF library like this:
\$chars = TCPDF_STATIC::pregSplit('/', 'u', \$str, -1, PREG_SPLIT_NO_EMPTY);
which is returning a boolean instead of an array. I don't know why it is doing this, so I have added the following 3 lines after it:

```
if (!is_array($chars)) {  
    $chars = array();  
} // if
```

The amended script is in the attached zip file. Try it and see if it fixes your problem.
