If you look at the PDF documentation you will see a change I made in May 2019 which allows multiple iterations through the _cm_output_Multi() method. This means using the _cm_output_Iterations() method to create an array of primary keys in the $iterations variable. The _cm_output_multi() method will be called separately for each entry in the $iterations array.

I have produced a test set which reads MNU_PATTERN -> MNU_TASK -> MNU_NAV_BUTTON. All the scripts and sample PDF output are in the attached zip file.
